Create a namespace

The screenshot displays the k.Modeler software interface. The top menu bar includes File, Edit, Navigate, Search, Project, Run, Window, and Help. The k.LAB Navigator on the left lists various categories like conservation, demography, earth, ecology, economics, engineering, geography, geology, hydrology, im, infrastructure, landcover, materials, physical, policy, ses, and soil. Below these are several 'im' namespaces, including 'im.aries.global', 'im.components.geoprocessing', 'im.data.global', 'im.data.osm', 'im.data.usa', and 'zuzana.san'. A context menu is open over the 'zuzana.san' namespace, with the 'New namespace...' option highlighted by a red circle. Other options in the menu include 'Delete project', 'Team', 'Compare With', 'Restore from Local History...', and 'Configure'. The main workspace shows the 'agriculture.kim' model, which includes a list of agricultural processes (Harvesting, Hilling, Hoeing, Mulching, Planting, Pruning, Ridging, Rolling, SeedBedPreparation, Sowing, Staking, Thinning, StubbleCleaning, Tillage) and a 'process Agriculture' block. The right sidebar contains a 'Version' section, 'Session events' (task/artifact), and a 'System Log' section.

Annotate a NDVI dataset

The screenshot shows the KIM software interface with a file explorer window open. A red arrow points from the 'Resources' folder in the KIM Navigator to the 'mosaic2018_Uganda_EastElgon_Boundaries' file in the file explorer. A red circle highlights the 'Resources' folder in the KIM Navigator. A purple box contains the text: 'NDVI dataset; drag and drop to Resources; ignore the error and press "ok"'. The file explorer shows a list of files and folders, including 'mosaic2018_Uganda_EastElgon_Boundaries' which is highlighted. The bottom status bar shows the file name and a date prompt.

Annotate a Land Cover dataset

The screenshot displays the KIM software interface with the following components:

- Left Panel (k.LAB Navigator):** A tree view showing project structure. The 'zuzana.sandbox' folder is expanded, revealing subfolders like 'elgon', 'normalized-difference-vegetat', and 'land-cover-type-resolver'. The 'land-cover-type-resolver' folder is highlighted with a red oval.
- Central Panel (Code Editor):** Displays a script for the 'elgon' namespace. The script includes a 'observe earth:' block with spatial parameters (urn, grid, projection) and two 'model' blocks. The second model block, which defines the 'LandCoverType' as 'Uganda', is highlighted with a red oval.
- Right Panel (Session events):** A list of session events including 'Observation', 'Dataflow', and 'Elgon'. The 'LandCoverType' is listed as an observation.
- Bottom Panel (Context):** Shows 'No context' and a green semi-circular progress indicator.
- Bottom Bar:** Includes 'Scenarios' (No scenarios active), 'Space', 'Time' (No temporal context), and a status bar with 'Writable', 'Insert', and '16 : 5'.

Annotation Code Snippet:

```
namespace elgon  
  
observe earth:  
  over space  
    urn = "local:zuzanaharmackova:zuzana.sandbox:  
    grid = "100 m",  
    projection = "EPSG:4326"  
  );  
  
model "Local:zuzanaharmackova:zuzana.sandbox:mosaic:  
as ecology:NormalizedDifferenceVegetationIndex;  
  
model "Local:zuzanaharmackova:zuzana.sandbox:Uganda_  
as landcover:LandCoverType;
```

Annotation Text:

This is an incomplete annotation – we didn't annotate the actual Land Cover classes (types)

Inspect and edit the dataflow user parameters before running

The following parameters admit user input in interactive mode. Please inspect the default values and change them as required. Press Submit Values to continue with the modified values, Use Defaults to proceed with the default values, or Cancel Run to stop the process.

Benefit criteria

Benefit criteria use a weight to express the relative positive impact of each criterion. The weight value, if passed, can be a single numeric weight or a map of stakeholder type to value. Values are only used for comparison and their absolute value is irrelevant.

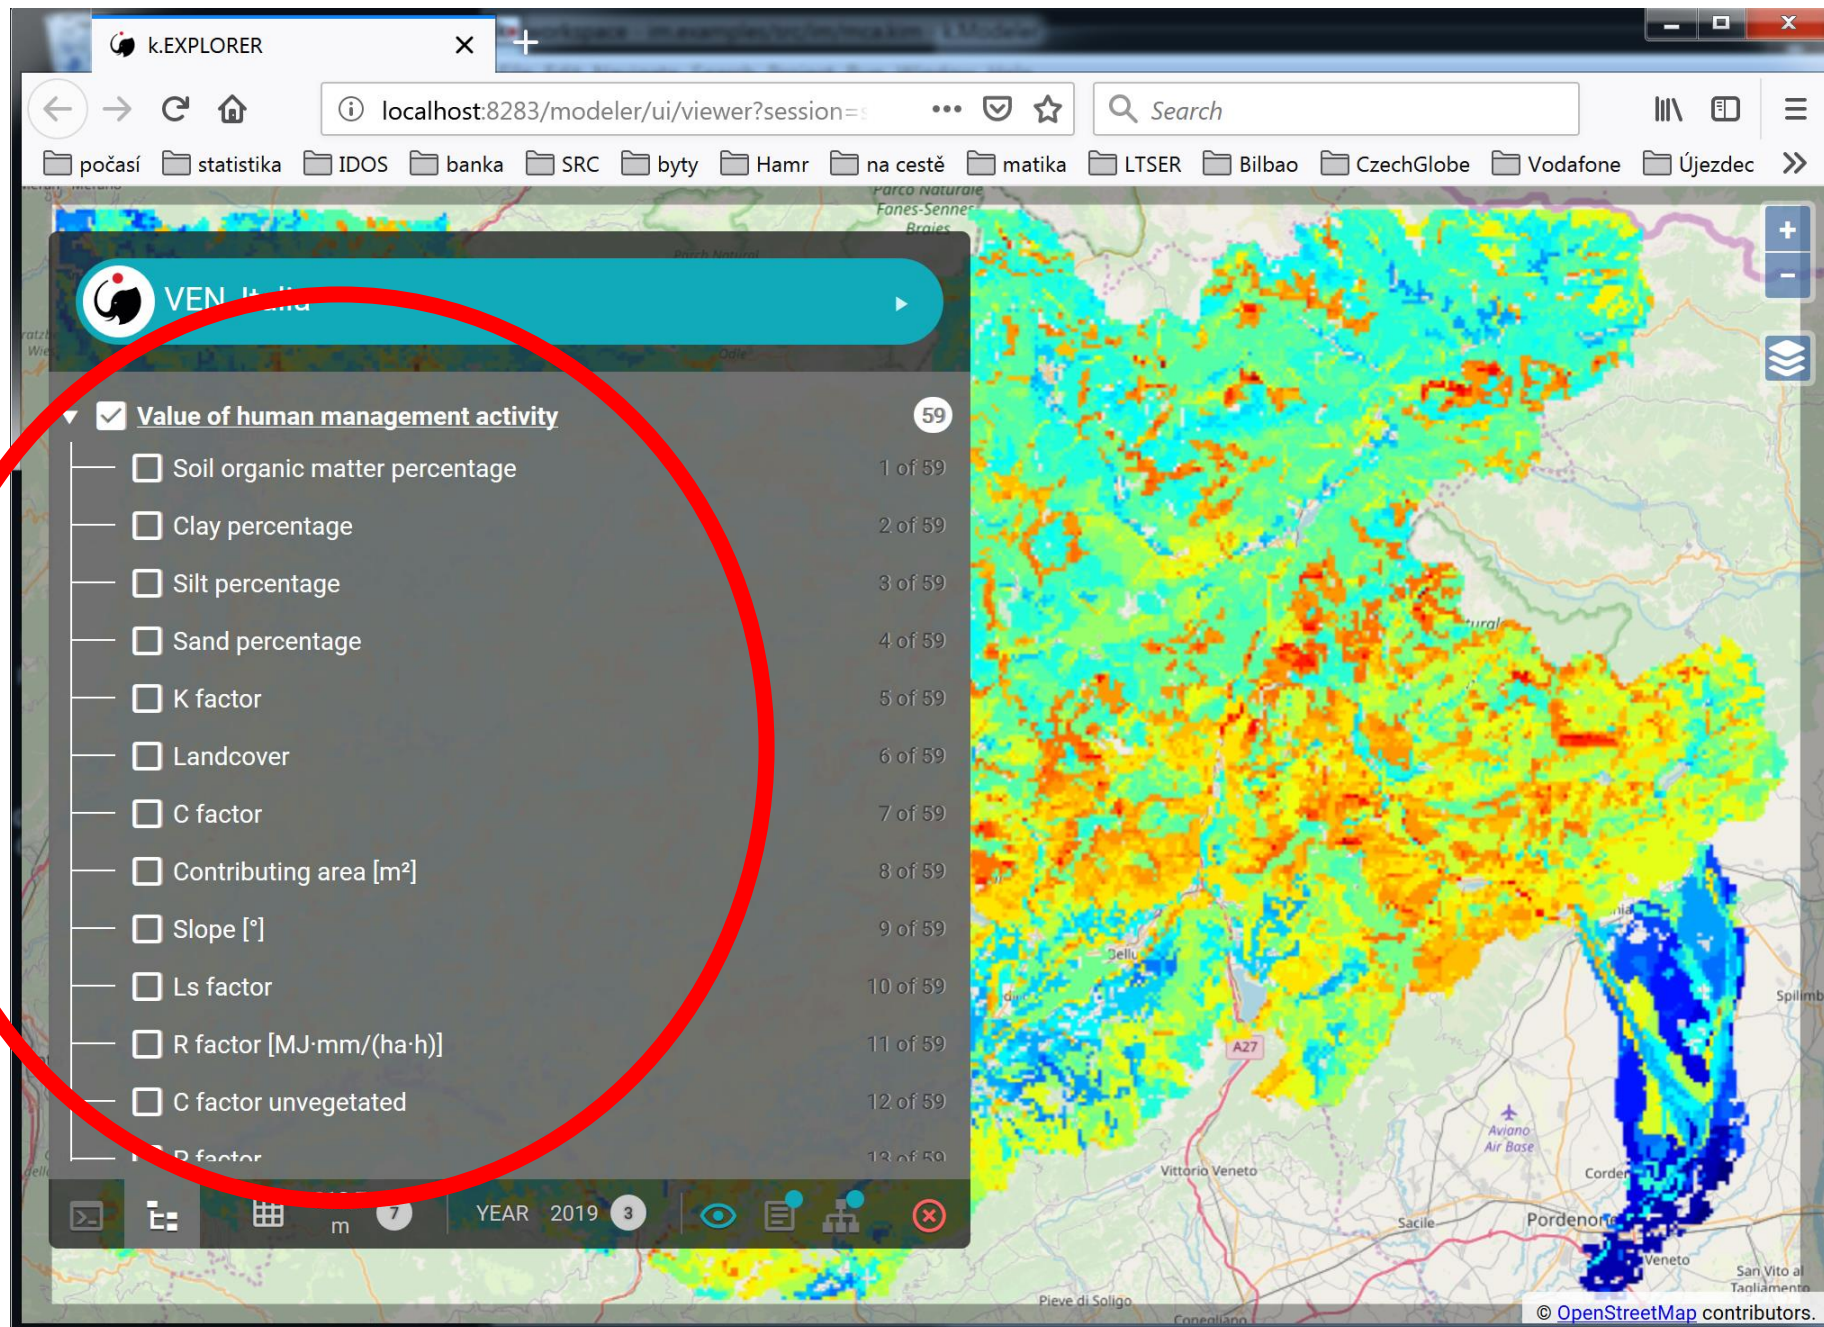

Weight for Sediment retention	1	
Weight for Carbon storage	1	
Weight for Flood regulation	1

workspace - k.M New k.LAB resource

New resource

Create a new k.LAB resource for a specified adapter. Use to specify all parameters manually when drag&drop or bulk import cannot be used.

Resource ID: `local:zuzanaharmackova:zuzana.sandbo` `ugandandvi`

Adapter: `wcs - WCS protocol adapter (OGC 2.0.1)`

Adapter property	Type	Value
<code>serviceUrl</code>	Text	<code>http://integratedmodelling.org/geoserver/ows/</code>
<code>wcsIdentifier</code>	Text	<code>stefano-balbi-eu-es-bi-geography:Uganda_ndvi2018</code>
<code>wcsVersion</code>	Text	<code>2.0.1</code>
<code>band</code>	Number	<code>0</code>
<code>nodata</code>	Number	

The WCS adapter is used to create WCS (Web Coverage Service) spatial coverages, supporting servers implementing version 2.0.1 of the WCS standard.

serviceUrl

The URL of the service providing the data.

Finish Cancel

In some cases it may be necessary to use a double underscore instead of ":" in wcsIdentifier

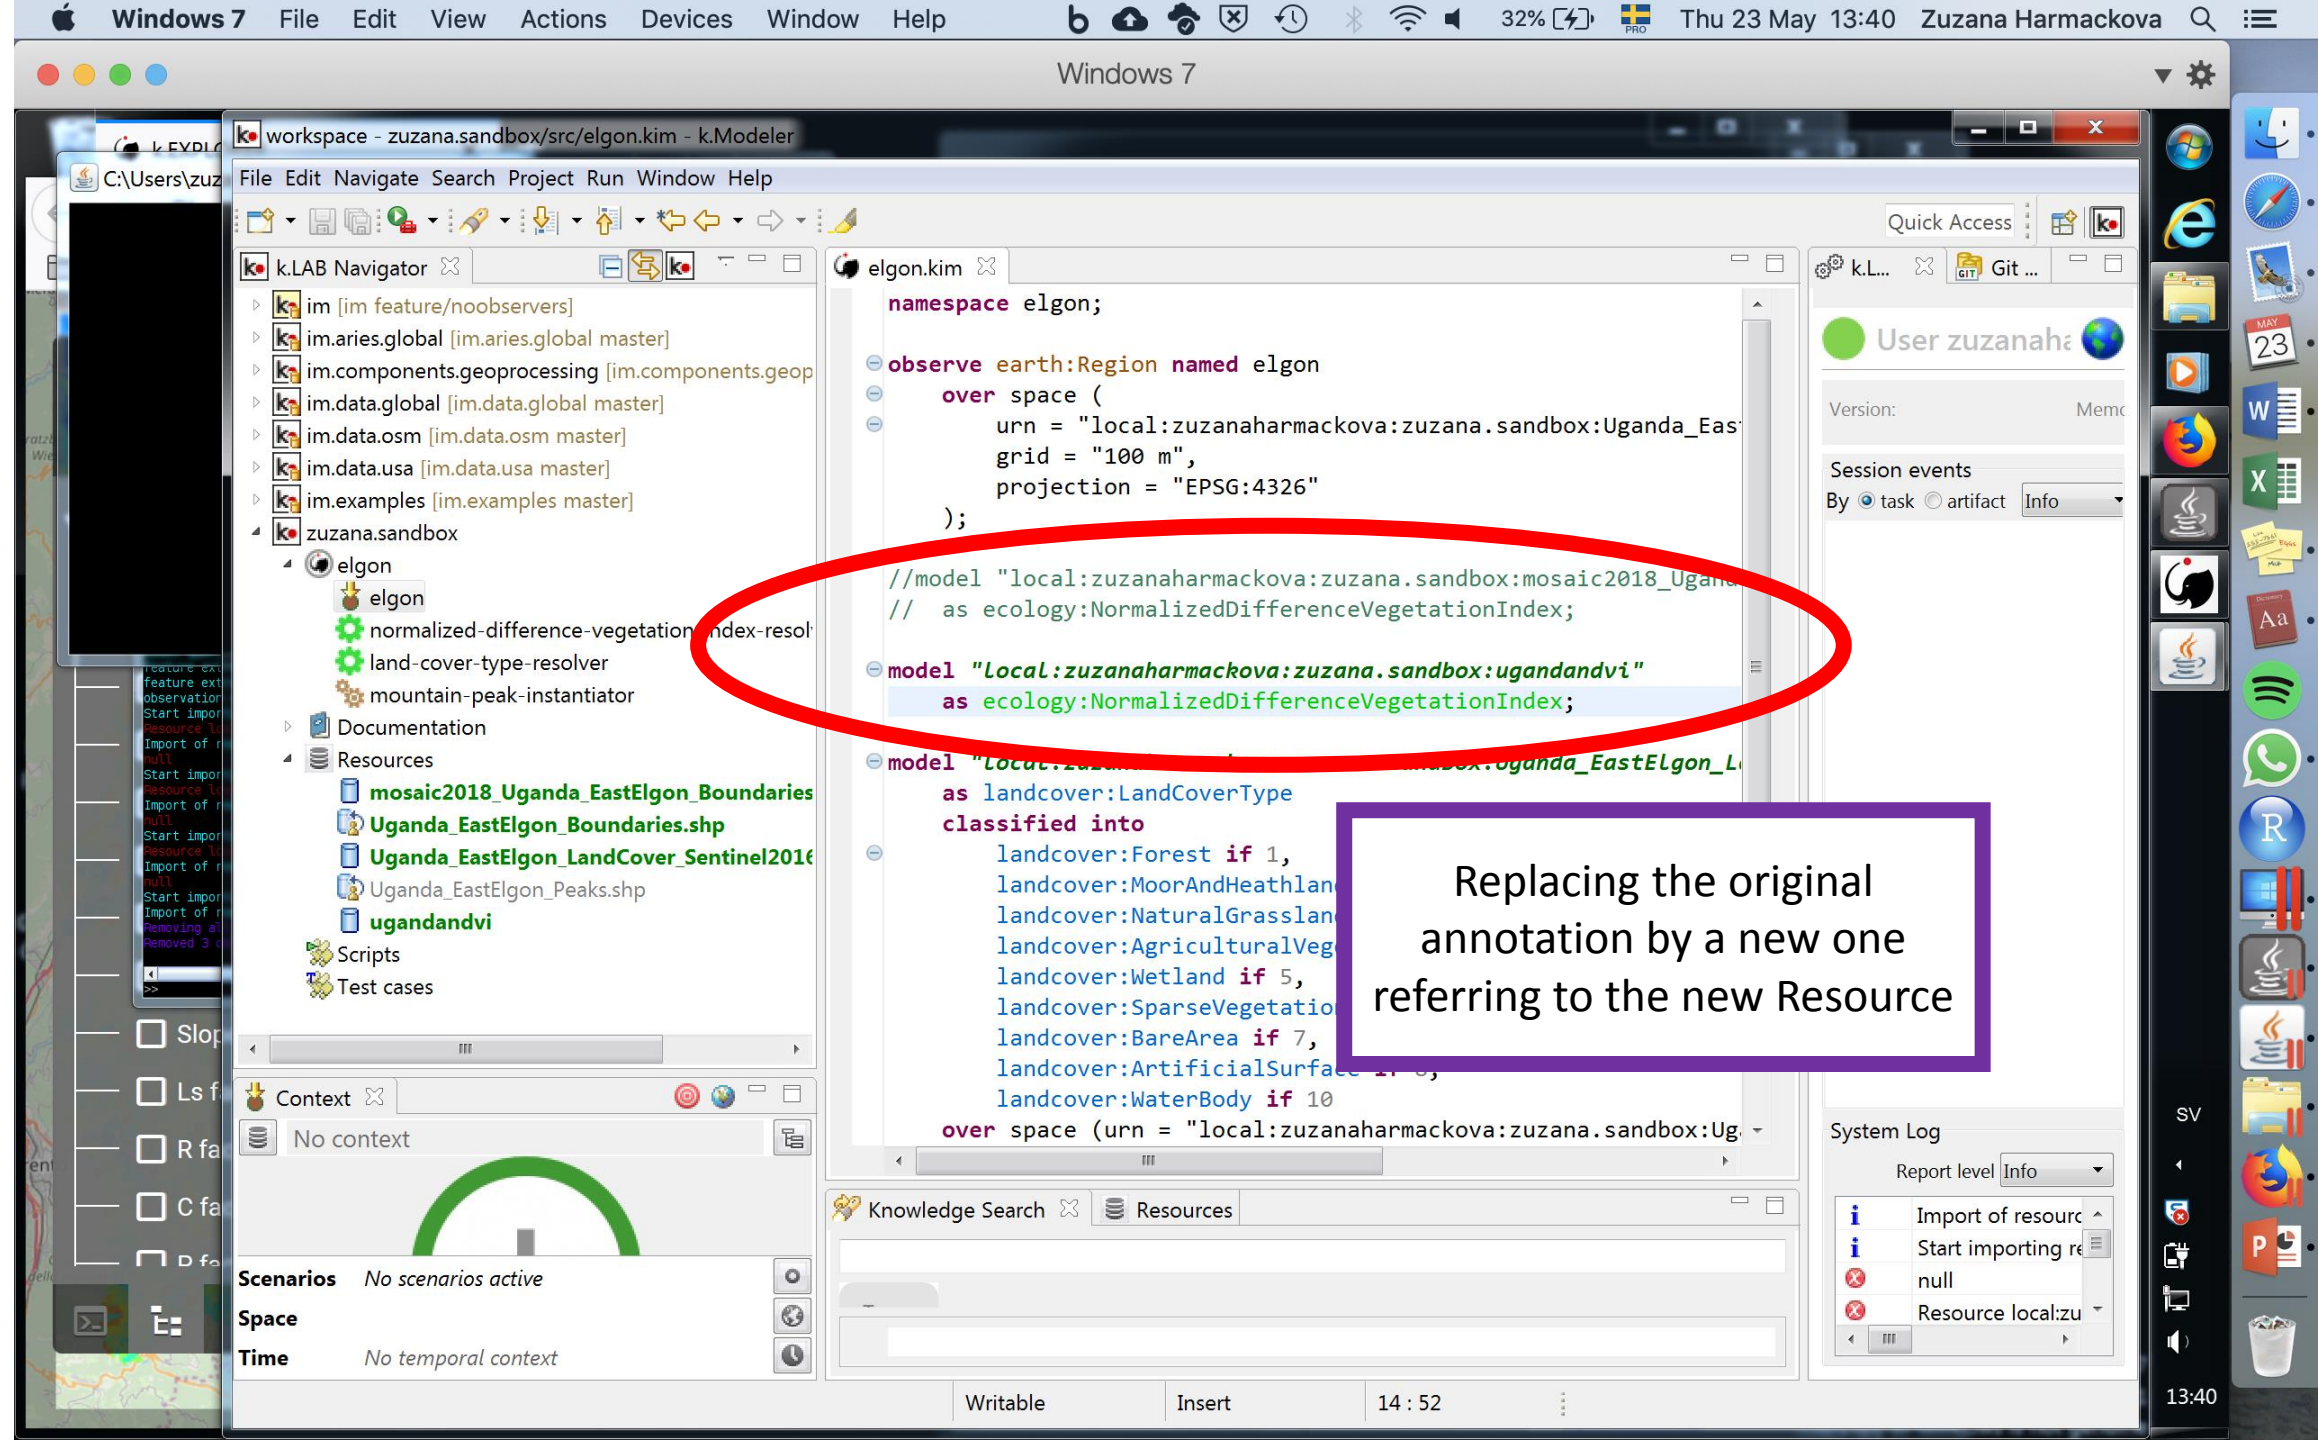

k.LAB v0.10.0

```
model query for explanation of [hydrology_000000021 = hydrology:StreamOutlet within earth:Region] found 0 models
TCA threshold is 122.0
model query for explanation of [earth_000000114 = earth:WaterBody within earth:Region] found 0 models
feature extractor: built 20 observations of type [water_body = earth:WaterBody]
feature extractor: skipped 41 features not conformant with passed options
observation completed with 100% context coverage
Start importing resource local:zuzanaharmackova:zuzana.sandbox:uganda_ndvi: this may take a while

>>
```

It may be necessary to repeat
the import of the Resource
several times before it
succeeds

The screenshot displays the k.LAB Resource Editor application. On the left, the 'k.LAB Navigator' shows a project structure under 'zuzana.sandbox'. A context menu is open for the resource 'ugandandvi', with 'Copy URN' selected. The main 'Resource editor' window shows the 'Resource data' tab, displaying the URN 'local:zuzanaharmackova:zuzana:ugandandvi' and a world map. The 'WCS adapter data' table at the bottom lists properties like 'serviceUrl' and 'wcsIdentifier'. The right sidebar includes 'Quick Access', 'User zuzanah', 'Session events', and a 'System Log' showing recent actions like 'Import of resource' and 'Start importing resource'.

Resources

Semantic differential between two non-semantic resources

If we needed a more complex mathematical expression, we use Groovy to write inside the []

Operator	Purpose	Remarks
<code>+</code>	addition	
<code>-</code>	subtraction	
<code>*</code>	multiplication	
<code>/</code>	division	Use <code>intdiv()</code> for integer division, and see the section about integer division for more information on the return type of the division.
<code>%</code>	remainder	
<code>**</code>	power	See the section about the power operation for more information on the return type of the operation.

Operator	Purpose
<code>==</code>	equal
<code>!=</code>	different
<code><</code>	less than
<code><=</code>	less than or equal
<code>></code>	greater than
<code>>=</code>	greater than or equal

And many more on:

<http://docs.groovy-lang.org/latest/html/documentation/core-operators.html>
